S.A.M. TACTICAL UTV

The S.A.M. Tactical UTV, available in both armored and unarmored variants, is a rugged, mission-adaptable platform engineered for law enforcement and military operations in demanding environments. Built on a TomCar chassis, it features a reinforced tubular steel frame, low center of gravity, and exceptional off-road mobility, allowing it to operate effectively across rough terrain, tight-access areas, and rapidly changing tactical conditions. Its durable modular design makes it well-suited not only for personnel and cargo transport, but also for specialized mission integration.

S.A.M. TACTICAL UTV

Designed to support more than basic mobility, the S.A.M. Tactical UTV can be configured to serve as a tactical lift-capable platform for remote weapons stations, surveillance systems, anti-drone defense equipment, and other mission-specific payloads. With dependable powertrains, long-travel suspension, and heavy-duty components, it delivers the stability, reliability, and adaptability needed for rapid deployment, perimeter security, counter-UAS operations, elevated response capability, and field support roles. Whether used for tactical law enforcement response, military operations, or specialized security missions, the S.A.M. Tactical UTV provides a proven platform that combines mobility, utility, and weapons-platform potential in one highly capable system.
